How to use DUX OS

A step-by-step guide for everyone in the society: residents, security guards, staff, managers, the committee and the admin. Pick your role above to see only what you need, or search for the task you have in mind.

App address: `society.duxos.in` · Works in any browser on a phone or a computer · Download as PDF

Getting started everyone

Sign in, find your way around and keep your account safe.

Sign in

1. Open **society.duxos.in** in your browser.
2. Type your **email or mobile number** and your **password**, then press **Sign in**.
3. The first time, the app asks you to **choose a new password** and accept the terms. The society admin also sees a short **Setup Wizard** (see Setting up the society).

> **TIP**
> If you forgot your password, ask the society admin. They open `Administration → Users & Roles`, find you and reset it. Every device you were signed in on is signed out, and you sign in with the new password.

Finding your way around

- **On a computer**, the menu is on the left, grouped under People, Community, Operations, Finance, Administration and My Account. Press **Collapse** to make it narrow.
- **On a phone**, open the menu with the button at the top left. A page opened from a link shows a slim **← Dashboard** bar so you can always get back.
- **You only see what your role needs.** A resident sees My Bills and Complaints, a guard sees the gate screens, the admin sees everything. If a screen you expect is missing, ask the admin (the admin can grant it under `Administration → Forms Matrix`).
- Your **name at the top right** opens the account menu: **Language**, **Help** (this guide, opened at the part written for your role), **Signed-in devices** and sign out. On a phone, **Help** is under **More**, below Language.

Choose your language: English, हिन्दी or मराठी

On a **phone**, open **More** at the bottom right and pick **Language** (it is the first row). On a **computer**, open your name at the top right and choose **Language**. The choice is kept

on that device, so you set it once.

GOOD TO KNOW

The menu and the main screens are translated. Names, notice texts and bill heads are shown as they were typed, and a screen that is not translated yet stays in English. Certificates and NOCs can also be downloaded as a Hindi or Marathi PDF (see Community life).

Your dashboard

The first page after sign-in shows the numbers that matter for your role, and chips for the things you do most. For example, a resident sees **Open Complaints**, **Visitors Waiting**, **Bills Due** and **My Flat**. A guard sees **Log Visitor**, **Check In**, **Check Out** and **Vehicle Gate**.

Who does what everyone

The same app shows different screens to different people.

ROLE	MAINLY USES
Resident / Tenant	Approve visitors, raise complaints, see and pay bills, update own details, register vehicles.
Security guard	Log visitors, check them in and out, check a vehicle number at the gate, punch in and out.
Housekeeping, technical staff, gym trainer	Punch in and out, see the day's duties and tick them off, hand over to the next shift.
Supervisor	Approve the team's punches, give duties, print and enter the duty sheets, correct attendance.
Manager	Everything a supervisor does for all departments, plus complaints, vendor bills, billing cycles, payments, the asset register and the daily checklist.
Committee (Chairman, Secretary, Treasurer, Member)	Billing rules, work order sanctions, accounts, defaulters, approving resident changes.
Society admin	Everything in the society: structure, users and roles, settings, billing, accounts.

For residents and tenants `resident · tenant`

Visitors, complaints, bills, your details and your vehicle.

Approve or reject a visitor

When the guard logs someone who is coming to your flat, you are asked to approve them.

1. On your dashboard, open **Approvals** (a number on the chip shows how many are waiting), or `Community → Visitors`.
2. Check the name and purpose, then press **Approve** or **Reject**.
3. The guard sees your answer straight away and lets the visitor in, or not.

Read the notices

Open `Community → Notices`. You see the notices meant for you, with the urgent ones first. If a notice says **Please confirm you have read this**, open it and press **I have read this**. The committee can see who has read it.

EMERGENCY

If a red bar appears across the top of the app, something is happening in the society: a fire, a gas leak, a medical emergency. Tap it to read what to do. It goes away when the committee or security ends the alert.

Book an amenity

1. Open `Community → Amenities` and tap the clubhouse, gym, hall or pool you want.
2. Pick the day with the arrows or the calendar. The page shows the opening hours and the times **already taken**. Your own bookings are marked **Yours**.
3. Press **Book on …**, choose the **from** and **to** times, how many people and what it is for. If there is a charge or deposit it is shown before you book.
4. It is **Confirmed** at once, or **Waiting for approval** when the committee approves bookings. You are told when it is decided, and a rejection shows the reason.

Your bookings are under **My bookings**. You can **Cancel booking** until it starts. The app will not let you book outside opening hours, above the most people allowed, on a closed day, over someone else's time, or beyond the amenity's rules (for example three hours at most).

CHARGES

A charge or deposit is noted on your booking, but it is not added to your maintenance bill. The committee collects it from you.

Meetings, polls and documents

- **Meetings** (`Community → Meetings`): upcoming general body and committee meetings with the date, place and agenda. The minutes and resolutions appear after the committee publishes them.
- **Polls** (`Community → Polls`): open a poll, pick one option and press **Vote**. **One vote counts for each flat**, so if someone in your flat has already voted, the poll says so. You see the results after you vote, or when the poll closes.
- **Documents** (`Community → Documents`): the bye-laws, minutes and audit reports the society has shared. Tap one to download it.

Ask for a NOC or a certificate

1. Open `Community → Certificates & NOC` and press **Request certificate**.
2. Choose **What do you need?**: a NOC for sale, rent, loan or renovation, a no-dues certificate, an address proof or another letter. Add a note if it helps, then press **Send request**.
3. The committee approves or declines. You are told either way, and a decline shows the reason.
4. When it is **Approved** it has a number (for example `NOC/2026-27/0001`). Open it to download the **PDF**, in English, हिन्दी or मराठी.

DUES

A NOC for sale, rent or loan, and a no-dues certificate, need your flat to be clear of dues. If you owe maintenance the committee may still approve it, and the dues are then printed on the certificate. Tenants can ask only for an address proof or another letter. You can have only one waiting request of a kind for a flat, and you can withdraw it until it is decided.

Parcels at the gate

When the guard logs a parcel for your flat, everyone in the flat is notified. Open `Community → Parcels` to see what is waiting at the gate. Collect it from the guard, or press **Collected** when you have it. A parcel you do not want is returned by the guard.

Maid, cook, driver: register and pass

1. Open `Community → Domestic help` and press **Add domestic help**.
2. Enter the **name**, **mobile**, the **work** they do and the flat. An ID proof note (for example “Aadhaar ending 4821”) is optional.
3. The committee approves the entry. They get a **pass number** like `DH-0001` valid for a year, and you can download the **pass card** with a QR code.

4. The guard records them **in** and **out** at the gate. You can see the last 30 days of visits on the person's page.

The same mobile number is the same person: if your help also works in a neighbour's flat, the neighbour just adds them too. Press **Stop coming to my flat** when they leave your service. When a pass expires, ask the committee to **Renew for a year**.

Raise a complaint

1. Open `Community → Complaints` and press **New complaint**.
2. Pick a category, describe the problem and save.
3. Follow it on the same screen. A complaint goes **Open** → **Assigned** → **In progress** → **Resolved** → **Closed**. If the work is not done properly, press **Reopen**.

See your bills

Open `My Account → My Bills`. Each bill lists every charge (maintenance, sinking fund, parking and so on), the due date and what is still unpaid. Open a bill to see the full break-up. The dashboard card **Bills Due** shows the amount outstanding.

Pay a bill

Open `Finance → Payments` and press **Record Payment**. Pick your flat, choose **Open bills, oldest first** (or **One bill**), enter the amount, the date and how you paid with the cheque or reference number, and attach a photo of the cheque or receipt if you have one. Press **Save & Generate Receipt**. Payments settle your **oldest bill first**, and anything extra is kept as an advance against the next bill.

Update your details

Open `My Account → Edit My Info`, change what you need and save. Your change shows **“Change request pending approval”** until the admin or a committee member approves it, so the society's records stay correct.

Register your vehicle

Add your vehicle (number plate, type) from the **Vehicles** section of your profile. The number is saved in capital letters without spaces, so `mh 12 ab-1234` becomes `MH12AB1234`. It appears in Parking Management straight away. If your society gives you a slot, the slot number shows on the vehicle.

> **NOTE**
> You can register a number only once in the society. A second car with no slot is still shown to the guard as registered, with no parking.

For security guards `security`

The gate: visitors and vehicles.

Log a visitor

1. On your dashboard press **Log Visitor**.
2. Enter the visitor's name, phone, purpose, the flat they are visiting and the vehicle number if they have one.
3. Save. The resident of that flat is asked to approve.
4. When the resident approves, open **Check In** and check the visitor in. When they leave, open **Check Out**. The full list is under **Visitor Log**.

Logged → **Waiting for resident** → **Approved** → **Checked in** → **Checked out**

If the resident rejects, entry is denied. A visitor who is still waiting for approval, was rejected, or has already left is shown in red on the vehicle check.

Check a vehicle at the gate

1. Press **Vehicle Gate** on your dashboard.
2. Type the number plate (capitals or small, with or without spaces and dashes) or scan it with a handheld or USB scanner, and press **Enter**.
3. Read the colour of the answer:

ANSWER	MEANS	YOU DO
Allowed	A resident or tenant vehicle that has parking today, or an approved visitor.	Let it in. Press **Log Entry**.
Registered, no parking	The vehicle belongs to the society but has no slot (a second car, an expired rental).	Send it elsewhere, or call the owner.
Not registered	The number is not known.	Verify by hand before allowing entry.

Press **Log Entry** or **Log Exit** to record the movement. Just looking a number up records nothing. After each check, press **Check Another Vehicle**.

Log a parcel

1. Open `Community → Parcels` and press **Log a parcel**.
2. Choose the **flat**, enter who it is **from** (the courier or shop), the **name on the parcel** and, if you like, what it looks like. Save. The flat's residents are notified.
3. When someone comes for it, open the parcel and press **Hand over**. Note who collected it. If it is refused or cannot be delivered, press **Return** and give the reason.

A parcel that has been collected or returned cannot be changed.

Domestic help at the gate

Open `Community → Domestic help`. Search by **name, mobile or pass number**, open the person and press the in/out button: the first press records **in**, the next one **out**. A person can only go in with an **active**, in-date pass for a flat. A pass that is **pending**, **expired** or suspended is refused, so send them to the flat or the committee. Leaving is always allowed. **Inside now** lists everyone who is in the society at that moment.

Your attendance

Open `Operations → Staff` (Staff Portal) and press **Attendance** to punch in at the start of the shift and out at the end. A night shift works too: punch in at 22:00 and out at 06:00 next day. Your supervisor approves each punch. If you are still punched in, you must check out before you can punch in again.

USE YOUR OWN LOGIN

Do not share one “guard” login among the team. The attendance and gate records name the login, so a shared one cannot show who did what.

For staff `housekeeping · technical · gym`

Your day in the Staff Portal: `Operations → Staff`.

Attendance
Punch in when you start and out when you finish. Time is the society's clock. More than 30 minutes after the shift start counts as late.

My Duties
The duties given to you today. Open one and tick each checklist item as you finish it.

Handover
Leave notes for the next shift: what is done, what is pending, anything to watch.

Tasks
Complaints and jobs assigned to you. Mark them in progress and then resolved.

If you forgot to punch

Ask your supervisor. You can request a **status** correction on a past day (for example, absent to present). The supervisor approves or rejects it. To fix the actual times, the supervisor enters the day from the printed sheet.

Paper sheets

Your supervisor may give you a printed duty sheet. Tick each item as you finish it and write your in and out times. The supervisor types the sheet into the app. See For supervisors and managers.

For supervisors and managers `supervisor · manager`

Approve the team's day, give duties, print the sheets.

Approve punches

Open **Approvals** on your dashboard. Every punch-in and punch-out of your team waits here. Approve or reject each. A rejected punch does not count as present, and the person can punch in again. Your dashboard also shows **Pending check-in**, **Pending punch-out**, **Absent** and **Late** counts.

Set up checklist templates (once)

Open `Operations → Checklist Templates` and create a template for each routine, such as “Floor cleaning” with its items (sweep, mop, dustbins…). Duties copy the items from the template.

Give duties

1. Press **Assign Duty**.
2. Under **Assign to**, pick one or several staff. Chips are grouped by department, with **Select all** for each.
3. Optionally pick a **Checklist template**. Fill the duty name, location and the **Duty date**.
4. For a daily round, switch on **Repeat on more days**, choose **Until** (up to 62 days) and tick the weekdays.
5. Set start and end times if you want, then save.

Print the duty sheets

From the duties screens you can print a sheet for one staff member, for a whole department, or a blank sheet for a template. A supervisor sees and prints only their own department.

HOUSEKEEPING, FLOOR BY FLOOR

The housekeeping sheet is one page per staff member for each wing: the floors are the rows (a 23-floor building fits one page) and the template items are tick columns. Three staff means three pages a day.

Enter a filled-in sheet

Open **Paper sheet entry**, pick the day and the staff, then enter the ticks and the in and out times from the paper. Entries made by a supervisor are approved already.

Corrections and handover

Attendance Corrections lists the status changes your team asked for. Approve or reject them. **Handover** shows the notes left between shifts.

Complaints

The manager opens **Complaints**, assigns each one to a department or person, and follows it to *Resolved* and *Closed*.

The manager's daily checklist `manager · committee · admin`

`Operations → Manager's Checklist` is the manager's working day on one screen: what to do today, what the records say needs attention, and the legal dates coming up. The manager's dashboard also has a **Today's checklist** card with the progress so far.

Today

The top shows how many items are done (for example **4 of 26 done**), how many are overdue, and how many are flagged from the records. Below it:

- **Needs your attention** lists what the society's own records say needs doing now: assets overdue for service or without an AMC, contracts and work orders running out or late, staff on duty who have not checked in, staff with no duty, leave and punch approvals waiting, open and week-old complaints, overdue bills, vouchers waiting for approval, low stock, expiring rent agreements, NOC requests, parcels left at the gate. Press a line to open the screen where the work is done. A line goes away by itself once the work is done, so there is nothing to tick.
- **Daily routine**, **Due this week or month** and **Statutory and compliance dates** are the items to tick off.

Tick, skip and undo

1. Press the box beside an item to mark it done. It shows who did it and when. Press it again to undo.

2. Press the item's name to open it. You see its details, the law it comes from, and an **Open the screen** shortcut.
3. If an item does not apply today, open it and press **Skip with a reason**. The reason is kept.

The list depends on your assets and staff

Items about a thing the society has appear only while it has it. Register a lift and the daily lift check appears; register a generator and the generator checks appear; retire the last lift and they go. In the same way the gate-register and guard checks appear only when you have security staff, and the cleaning checks only when you have housekeeping staff. Each item says why it is there, for example *2 lifts in your assets*. So keep `Assets` and `Staff` up to date.

Close the day

Press **Close the day**, add remarks (what was left, anything to tell the committee) and press **Sign off**. Pressing it again the same day updates the sign-off. **Download PDF** (the top right) prints the day's sheet with a box beside each line, the things flagged from the records, a place for remarks and signatures.

Compliance: the legal dates

The **Compliance** tab lists every statutory date and licence, each with the law it comes from and one of these states: **Overdue**, **Due in 20 days**, **Valid until 12 Mar 2027** or **Not recorded yet**.

1. Press an item and enter the **date done** and a **reference** (certificate, challan or policy number).
2. For a licence or certificate (lift licence, insurance, pollution-control consent…) also enter **Valid until**. That sets when it needs renewing, and it shows on the checklist as the date comes near.
3. If it does not apply to your society, press **Does not apply — skip** and give the reason in the note.

A date that had already passed when the item first appeared is not shown as overdue. It waits under **To confirm** for you to say whether it was met, or to record it.

CHECK THE LEGAL ITEMS YOURSELVES

The built-in legal items are a starting list, not legal advice. Dates, forms and limits change by notification, and your registration and bye-laws decide what applies to you. Have the committee or your auditor go through them once, switch off what does not apply and change what differs. All societies get the all-India items (income-tax, GST, wages, PF and ESIC, fire drills, electrical safety and so on). A society whose state is set to **Maharashtra** in `Society Settings` also gets the Maharashtra items (annual general meeting, audit, committee meetings, fire inspection, lift licence, committee election). For another state the screen says its rules are not built in: add them as your own items.

The list: switch items off and add your own

- The **The list** tab shows every item with a switch. Switch off what you do not need. Press an item to reword it or move its day. Built-in items are switched off, not deleted.
- Press **Add item** to make your own: say what is to be done, how often (every day, week or month, on fixed months, or when a licence runs out), how many days before it should show, and, if you want, that it applies only when you have a certain kind of asset or staff. Tick **A statutory or legal requirement** to put it in the Compliance tab. Your own items can be deleted.
- Only the admin or a committee member can change or switch off a statutory built-in item.

A GOOD FIRST WEEK

Open the Compliance tab and record the dates you know: insurance, lift licence, last audit, last AGM. Then open **The list**, switch off anything that does not apply, and from then on work from **Today**.

LIMITS

The checklist does not send reminders; it shows what is due when you open it. Ticks and sign-offs are kept with the name of who made them, but there is no history screen for them yet.

Setting up the society `admin · committee`

Do this once, in this order. `Administration → Setup Wizard` walks you through it.

1 Society profile → **2 Wings** → **3 Floors** → **4 Flats** → **5 Users & roles**

Society profile

`Administration → Society Settings`: name, address, bank details for bills, the society's time zone (India by default). Staff punches use this clock.

Wings, floors and flats

Add each **wing**, then its **floors**, then the **flats** with their area in sq ft (area-based charges need it). The Setup Wizard has a button for each step.

Residents and tenants

`People → Residents` and `People → Tenants`: add one by one, or import a list. Open a flat to see who lives there, their vehicles and their dues. When someone leaves, open their profile and press **Move Out**: their vehicles are unassigned and their parking is released.

Import residents from a sheet

1. On `People → Residents` press the **Import Residents** icon at the top, then **Download Template** to get a sample file.
2. Fill one row for each resident, or use your own sheet (Excel saved as CSV). The app finds the columns by their **headings** in any order, and understands the usual names (“Mobile No”, “Date of Possession”, “Carpet Area”…).
3. Check the preview. Rows with a problem are listed with the reason, and you can export them, fix them and import again. Rows that are fine are imported.

COLUMN	WHAT TO PUT
Wing, Flat Number	Required. They must match the wings and flats you created.
Full Name	Required.
Resident Type, Is Primary	Owner / Tenant / Family member, and whether this is the main member of the flat.
Phone, Email, Floor	Optional.
Possession Date (or **Purchase Date**)	Day first, for example `15/06/2024`. If a sheet has only a purchase date it is used as the possession date. Bills can start from this date (see Maintenance bills).
Electric Meter No, Consumer No	Saved against the flat.
Flat Type	`1 BHK` to `4 BHK`, `Studio` (1 RK is saved as Studio), `Penthouse`, `Duplex`, `Shop`, `Office` or `Other`. “2BHK”, “2 bedroom” and a bare “2” are understood; 2.5 BHK is read as 2 BHK and 5 BHK or more as Other. Preview notes any change.
Area (sq ft)	A number such as `650` or `1,050`; “650 sq ft” is fine, and a figure marked sq m is converted to sq ft. The area decides the share of area-based charges.

The flat type, area and dates are saved on the flat and shown on the resident's page. Shops and staff have their own imports on their pages.

Approve resident changes

`Community → Pending Resident Changes` lists details residents asked to change. Approve or reject each.

Staff

`Operations → Staff`: add staff one by one or import a list. A login is created for each staff member, so everyone has their own. You can view, reset, disable or enable a staff login from the staff page.

Notices and emergency alerts

1. Open `Community → Notices` and press **New notice**.

2. Write the title and the notice, say what it is about and how important it is, and choose **who it is for**: everyone, all residents, owners only, tenants only, chosen wings, chosen flats, all staff, the security team or the committee.
3. Optionally set a date to **take it down after**, and switch on **Ask people to confirm they have read it**.
4. Press **Publish now** to send it, or **Save as draft** to finish it later. Nobody sees a draft.

Under **Manage** you see drafts, published and archived notices. Open one to see who has read it and who has not. A published notice can't be changed: **Archive** it and write a new one.

For a fire, a medical emergency or a gas leak, press **Emergency alert**. Choose the kind, say what is happening, where, and what people should do, and choose who is told. A red bar shows across the app for everyone until you press **End this alert**. The manager and the security team can raise and end alerts too.

Amenities

1. Open `Community → Amenities` and press **Add amenity**. Give the **name**, the **kind**, the opening and closing times, the most people at a time, and say whether residents book a time, whether you approve each booking and whether there is a charge.
2. Open the amenity. Under **Rules** add limits: the longest booking, the most people, bookings a week or month, how far ahead, a deposit. Setting a rule again replaces it.
3. Under **Rates** add a price per booking and/or per hour and a deposit. The rate marked **Used** is the one bookings take.
4. Under **Closed dates** close a day (painting, a society event). Nobody can book it; bookings already made are left for you to cancel.

Bookings that need approval are under **Requests**: press **Approve**, or **Reject** and say why. **All bookings** lists everything; cancel one or press **Mark as used** afterwards, noting any damage. The manager can decide bookings too. **Close this amenity** at the bottom of its page takes it off residents' lists.

Users and roles

`Administration → Users & Roles`: add users, give each a role, reset a forgotten password, suspend someone who left. The **Permission Matrix** and **Forms Matrix** show and change which role can use which screen.

Community life `admin · committee · manager`

Meetings, polls, documents, certificates and NOCs, parcels and domestic help, from the office side.

Meetings and minutes

1. `Community → Meetings` → **Schedule a meeting**. Give the title, the kind of meeting, date, time, venue and agenda.
2. Switch on **Tell residents now** to send everyone a notification, then press **Schedule**.
3. After the meeting open it and fill in **Minutes**, who was **Present** and each resolution (**Add a resolution**, with who proposed it).
4. Keep **Share with members** off while you finish; only the committee can read the minutes until you switch it on and press **Save minutes**.

A meeting that will not happen can be cancelled with **Cancel this meeting**.

Polls

1. `Community → Polls` → new poll. Write the **Question**, add 2 to 10 **Options** and the date **Voting closes on**.
2. Choose when results are shown: **After a flat has voted** or **Only when the poll closes**. Press **Start poll**.
3. Each flat has **one vote**, cast by an active resident of that flat. Press **Close poll** to end it early. Results are totals, not who voted for what.

Documents

`Community → Documents` → **Add a document**: bye-laws, minutes, audit reports, forms. Choose the kind, give it a title, pick the file (PDF, image, text, Word or Excel, up to 10 MB) and choose **Who can see it**: **Every member** or **Committee only**. **Remove** takes a document off the list for members.

Certificates and NOCs

1. Requests from members appear in `Community → Certificates & NOC`, and you are notified. You can also raise one for a flat yourself.
2. Open a request and press **Approve**, or **Decline** with a reason (the reason is needed to decline).
3. For a NOC (sale, rent, loan) or a no-dues certificate, the app checks the flat's dues. If they are not clear it says **Dues are pending** with the amount. **Approve anyway** is your decision; the dues are then printed on the certificate.
4. An approved certificate gets a number such as `NOC/2026-27/0001` (per society, per financial year). Download the **PDF** in English, हिन्दी or मराठी and hand it to the member; they can download it too.

Domestic help passes

When a member registers a maid, cook or driver, it shows as **Pending** and you are notified. Open it and approve to issue a pass (`DH-0001`, valid one year). You can **Suspend pass**, end it, **Activate again** or **Renew for a year**. Help you register yourself is active straight away. The pass card is a printable PDF with a QR code.

Parcels

Security logs the parcels; you and the manager see all of them under `Community → Parcels`. Parcels are not chased automatically; if one has been at the gate too long, ask security to return it.

Automatic tasks `admin · committee`

Reminders that the app sends by itself, so nobody has to remember. `Administration → Automatic tasks`.

TASK	WHEN	WHAT IT DOES	STARTS AS
Maintenance dues reminders	Daily	Reminds members whose dues are older than the number of months you set, and does not remind the same flat again before the days you set.	**Off** (it goes to members)
Tenant agreement alerts	Daily	Tells the office (and the tenant) 30 days and 7 days before a rent agreement ends.	**On**
Asset service and warranty digest	Weekly	One note to the office: services due or overdue, warranties ending soon.	**On**
Billing cycle reminder	Weekly	From the 3rd of the month, reminds the office if there is no billing cycle for this month yet.	**On**
Expire unanswered visitor requests	Daily	A visitor request nobody answered for 24 hours is closed as expired.	**On**

Each task has a switch, shows **when it last ran and what it did**, and a **Run now** button to run it at once. The tasks run each morning after 8 o'clock society time.

NOT AUTOMATIC ON PURPOSE

Generating bills, late fees and posting recurring expenses move money, so a person still does them. The dashboard and the billing reminder tell the office when they are due.

Maintenance bills `manager · treasurer · committee`

How each flat's bill is worked out, and the monthly routine to issue it.

Elements → **Charge heads** → **Billing cycle** → **Preview** → **Generate** → **Issue** → **Payments**

Maintenance Elements

`Finance → Maintenance Elements` is the list of things the society charges for: Service Charges, Security, Housekeeping, Lift, Common Electricity, Water, Property Tax, Sinking Fund, Repairs Fund, Insurance, Parking and more. The standard list is ready; edit it or add your own.

Charge heads and rules

`Finance → Maintenance Billing` has four tabs: **Cycles**, **Charge Heads**, **Rules** and **Fines & Charges**. A charge head says how an element is shared among flats:

BASIS	YOU ENTER	EACH FLAT PAYS
Same for every flat	₹ per flat per month	That amount
Per sq ft	₹ per sq ft per month	Rate × flat area
% of construction cost	% per year	Area × cost per sq ft × % ÷ 12
Annual budget, split equally	₹ per year	Budget ÷ flats ÷ 12
Annual budget, split by area	₹ per year	Budget × flat area ÷ total area ÷ 12
Per parking slot	₹ per slot per month	Rate × the flat's slots

Under **Rules** set the construction cost per sq ft (needed for the sinking and repair funds), the interest on late payment, grace days, the extra percentage for flats let to tenants

(non-occupancy, 0 to 10%), and GST if the society is registered.

Budget from expenses: switch it on for a charge head and the bill uses what the society actually spent on that element over the last months. **Suggest from expenses** shows the figures first. Nothing changes until you apply it, and bills already made are never recalculated.

Make and issue a bill

1. `Maintenance Billing → Cycles` → **New cycle** for the period, for example “October 2026”.
2. **Preview** shows every flat's bill with warnings (a flat with no area, no construction cost). Fix those first.
3. **Generate** creates the bills, then **Issue** sends them to the members.
4. To print or share them, open the cycle and press **Print all bills** (the share icon beside it sends the file). You get every bill in one PDF, a bill to a page, flat by flat. Cancelled bills are left out. For a large society it can take a little while to prepare.

Billing from the possession date

By default each cycle bills a flat for that cycle only. To bill a new owner from the day they took possession, or to catch up a month that was missed, set a start date once: `Maintenance Billing → Rules → Billing start date`.

- A flat with **no bill yet** is billed from its **possession date** (never earlier than the start date). Every later bill runs from the day after the previous bill to the end of the cycle.
- A part of a month is charged **by its days**: possession on the 16th of a 30-day month pays 15/30 of that month.
- If a cycle was skipped, the next one **catches up** the months in between. **Preview** shows the period and the number of months for every flat, with a warning, before you generate anything.
- A flat whose possession date is **after** the cycle is not billed in that cycle.
- A flat with no possession date is billed from the start date. Add the date on the flat, or import it (see Import residents).
- Leave the field empty to go back to one cycle at a time.

Fines and extra charges on one flat

`Maintenance Billing → Fines & Charges`: add a fine or an extra charge to one flat with a reason and a start date, once or on every bill until an end date. The member is notified.

Waive interest for one flat

When the committee agrees that a member need not pay interest, or should pay less, open `Maintenance Billing → Fines & Charges`, scroll to **Interest concessions** and press **Waive interest**. Pick the flat, choose **No interest** or **Lower rate** (a % a year, up to 21), set the days it covers (leave *Until* empty to run until you cancel it) and write the **reason**. It is kept on record with your name.

- It applies from that flat's **next bill**. Bills already issued do not change. The bill's interest line then says *adjusted as approved by the committee*.
- Only the **committee or admin** can add or cancel a concession. The manager can see the list.
- If two cover the same day, the newest one counts. To end one early, press the **×** beside it and give a reason.
- The arrears themselves stay on the bill; only the interest changes.

Record payments

Open `Finance → Payments` → **Record Payment**, or **Record Payment** inside a bill. Pick the flat, choose **Open bills, oldest first** or **One bill**, enter the payment details and attach a photo of the cheque or receipt, then **Save & Generate Receipt**. A payment settles the **oldest bill first**. Extra money becomes an advance for the next bill. If a payment is rejected, it is taken back out of the books.

Defaulters and bank matching

- `Finance → Defaulters` ages the dues from the due date. Three months overdue makes a member a defaulter. Send reminders from here.
- `Finance → Bank Reconciliation`: match your bank statement to the recorded payments. A bounced cheque reopens the bills it had paid.

The monthly routine

WHEN	WHO	WHAT
As bills come	Manager	Enter every vendor bill under **Vendor Bills**, with its expense head.
Daily	Manager / Treasurer	Enter small expenses with **Add Expense** (see Daily expenses).
Each cycle	Manager	New cycle → Preview → Generate → Issue.
As money comes	Manager / Treasurer	Record payments.
Monthly	Treasurer	Bank Reconciliation.
Monthly	Committee	Look at Defaulters and send reminders.
Quarterly	Committee	Compare spend with the billed amount (**Suggest from expenses**).

Daily expenses and accounts `manager · treasurer · committee`

Where to put daily and monthly expenses, and how they count towards each maintenance element.

Add an expense

Use this for anything the society spends: a petty-cash purchase today, or this month's security, electricity or lift bill.

1. Open `Finance → Accounts` and press **Add Expense**. (It is also on `Maintenance Elements` as **Add expense**.)
2. Choose the **date** and **what it is for** (the maintenance element: Security, Lift, Housekeeping…). Pick *Other* if it is not billed through maintenance.
3. Choose the **expense head**. If the element has one head, it is chosen for you.
4. Enter the **amount** and **Paid from** (cash in hand or a bank account). Add who was paid, the bill number and a note if you like.
5. Press **Save expense**, or **Save and add another** for a batch of small bills.

IT LINKS ITSELF

Saving adds a payment voucher to the books and links the expense head to the element you chose, so the spend counts towards that element from then on. You do not link anything by hand.

If the expense head you need does not exist, add it first under `Accounts → Chart of Accounts`.

Entering many vouchers: the keyboard (computer)

On a computer, **Add Expense** and **New Voucher** (receipt, payment, contra, journal) can be filled without the mouse, the way accountants work in Tally:

- The cursor starts in the first ledger (or in *What is it for?*). **Type a few letters** of the name — a ledger, a head, a flat or a member — and the list narrows. **Up and Down** move through it and **Enter** takes the highlighted one and moves to the next field.
- **Enter** moves from field to field; Enter on a field that already has a value just moves on. **Tab** also moves on, and **Shift+Tab** goes back.
- **Ctrl+S** (Cmd+S on a Mac) saves. **Ctrl+Enter** saves and opens a clean voucher of the same kind and date, with the cursor back in the first ledger, ready for the next one.
- In a journal, pressing Enter on the last amount while debits and credits differ opens the next line. **Alt+L** adds a line to any voucher.

The hints are shown at the foot of the form. On a phone nothing changes: tap a field to pick from a list.

Monthly expenses

For what you pay every month, set it up once under `Accounts → Monthly Expenses` with **Add monthly expense**: the name, the expense head, the amount (leave it blank for a bill that changes, like electricity), the day it falls due and who is paid. Each month it appears under **Due now**, and the Accounts page shows a banner while any are waiting.

1. Press **Record** beside the month. The amount is filled in; change it if this month's bill was different, and enter it for a bill that varies.
2. Check the date and where it was paid from, add the bill number if you have it, and press **Record payment**. It is booked as a payment under its maintenance element.
3. If the month does not apply, or was paid another way, press **Skip**. Nothing is booked.

Nothing is booked until you record it, so the books only show what was paid. A month you missed stays due. To pause an expense, open it and turn off **Running**.

See spend by element

`Accounts → Spend by Element` shows, for a month or the year so far, what was spent on each element and on which heads. An element with no entry says **Nothing recorded**, which makes a missed month easy to spot. Tap a head to open its ledger. At the bottom, **Not counted towards any element** lists spend on heads no element covers, with a **Link…** button to assign each.

Your books

If something in the books looks wrong, a red bar appears at the top of **Accounts**: *Cash in Hand is ₹5,000 in credit (negative)* means more was paid out than was ever received, so an opening balance or a receipt is missing; *Opening balances don't agree* means debits and credits differ. Press **Fix** to open the ledger (or the Chart of Accounts) and correct it. The bar goes away by itself once the figures are right.

The **Accounts** page opens with Bank Balance, Cash in Hand, Members' Dues, Payable to Vendors, and this year's Income and Expenditure. Below that:

Day Book
Every voucher, date-wise. Print it for any period.

Vouchers
Receipt, Payment, Contra and Journal. You can correct one while its year is open, with a reason.

Chart of Accounts
The list of ledgers. Edit an expense ledger to choose which element it counts towards.

Reports
Trial Balance, Income & Expenditure, Balance Sheet, Receipts & Payments, Schedule of Funds. Each can be a PDF.

Bills and payments post to the books on their own. If something recorded earlier is missing, press **Post now** on the Accounts page.

Closing the year

After 31 March, admin or committee closes the year in order, oldest first. A closed year is locked, so nothing can be entered in it. The latest closed year can be reopened with a reason.

Vendors and work orders `manager · committee`

`Operations → Vendors & Work` has four tabs: **Work Orders**, **Contracts**, **Vendors** and **Limits**.

One-time work, step by step

1. **Create** the work order (manager or committee) with a title, vendor and expected cost.
2. Add **quotations** from different vendors.
3. The committee **sanctions** it. The **Limits** tab holds the society's spending limits that decide what an order needs.
4. **Issue** the work order to the vendor. A printed copy is available.
5. Record the vendor's **bills** against it, then record each **payment**.
6. The committee **certifies completion**, then **releases any retention** and closes the order.

Annual contracts (AMC)

The **Contracts** tab keeps yearly contracts such as the lift or the security agency, with their dates and amounts. Bills against them go to the right expense head.

Vendors

The **Vendors** tab is the vendor master: company, category, contact, and a blacklist for vendors you no longer use. Enter any other vendor bill under `Finance → Vendor Bills` and pick its expense head. It then counts towards the matching element.

Parking admin · committee

`Operations → Parking Management` has three tabs.

Slots
Add a zone (Basement, Open…) and then its slots.

Allocations
Who holds which slot. Press **Release** to give it back.

Vehicles
Every registered vehicle. It opens on **No parking**, the vehicles still waiting. Search by plate, owner or flat.

Give a vehicle a slot

1. Open the **Vehicles** tab. It shows the vehicles with no parking.
2. Press **Allot parking** beside the vehicle and pick a free slot.

3. For rented parking, add the monthly charge and an end date. When the end date passes, the parking stops counting at once and the slot is free again.

One vehicle holds one slot, and one slot goes to one vehicle. The guard's **Vehicle Gate** screen reads this list.

Parking on the maintenance bill

Make a charge head from the **Parking Charges** element with the basis **Per parking slot**. Each flat then pays that rate for every slot it holds on the day the bill is made. A slot allotted with its **own monthly charge** pays that figure instead. A slot that has not started, or whose end date has passed, is not billed.

Cars and two-wheelers. If a scooter or motorcycle pays less than a car, open the parking charge head and fill in **Two-wheeler rate per slot per month**. The bill then shows two lines, *Parking — cars* and *Parking — two-wheelers*. A slot is a two-wheeler slot when the vehicle on it is a motorcycle, scooter or bicycle. Leave the box empty and every vehicle pays the car rate on one line. A slot with its own monthly charge still pays that figure.

Stores `manager · committee · admin`

`Operations → Stores` keeps the things the society uses up or lends out: floor cleaner, bulbs, gloves, tools, uniforms. It shows what is in stock, what is running low, and who has what.

Add an item and bring stock in

1. Press **Add item**. Give the **name**, the **kind**, what it is counted in (litre, piece, box…) and the level at which you want it to show as **low**. Say where it is kept if you like.
2. Open the item and press **Stock in**. Enter how many came in, and the cost and bill number if you have them.

The tiles at the top show the items, how many are **Running low**, how many are out with people, and the value of the stock. An item at or below its minimum shows as low; at zero it shows **Out of stock**.

Give something to a staff member

1. Open the item and press **Issue**. Choose the staff member, how many, and what it is for.
2. If it will be **used up** (cleaning supplies), switch that on. Nothing is expected back. Otherwise choose a **bring it back by** date.
3. Press **Issue**. The stock goes down straight away. You cannot issue more than is in stock.

Under the **Issued** tab, **Still out** lists everything that has not come back and **Overdue** lists what is past its date. Press **Take back**, enter how many came back and their condition. Good items go back on the shelf. **Damaged** or **lost** ones are closed off but do not go back into stock.

Correct the count

After counting the shelf, open the item and press **Correct the count**. Enter what you counted and say why it changed. The change is recorded under **Every movement** with your name.

LIMITS

The app does not remind anyone about overdue returns, and stock cannot be issued to a resident. An item can be retired from its edit page only when none is in stock and none is out.

Assets `manager · committee · admin`

`Operations → Assets` keeps what the society owns: air conditioners, water pumps, the lift, the generator, CCTV. Each has its place, warranty, service schedule and history.

Add an asset

1. Press **Add asset**. Give it a **name** (for example “Terrace water pump”) and choose the **kind of asset**.
2. Say **where it is**, and how often it is serviced in months (3 for an AC, 6 for a pump). Add the last service date if you know it.
3. Fill in the purchase date, cost, who you bought it from and the **warranty date** if you have them. Only the name and kind are required.

The app works out the **next service due** from the interval. Each asset shows **Service on schedule**, **Service in 12 days** or **Overdue by 7 days**, and the top of the page counts assets, services due, warranties ending and the value at cost. Use **Needs service** to see only what is due.

Log a service

1. Open the asset and press **Log a service**.
2. Choose what was done (routine service, repair, AMC visit), the date, who did it, the cost and what was found.
3. Press **Save service**. “Last serviced” and “Next due” move on by themselves.

4. If it cost money, the app asks **Record as an expense?**. Say yes and the Add Expense form opens with the amount filled in. Choose the element (for example Lift or Common Electricity) and save.

To book a visit for later, press **Plan a service**. It shows under **Planned services** on the asset, where you press **Done** after the visit or cancel it.

Contracts and retiring an asset

- **Add service contract** records an agency's contract for that one asset, with dates, yearly cost and what is covered. Yearly contracts with the committee's sanction stay under `Vendors & Work`, and show on the asset's page when linked to it.
- The menu at the top right of an asset marks it **under repair**, **retired**, **sold or scrapped** or **lost**. It stays on record, but leaves the counts and needs no service.
- The pencil at the top right edits any detail. Clear a field to remove it.

Devices and security everyone

You can use your login on several devices, and you stay in control of them.

Signed-in devices

Open your **account menu → Signed-in devices**. It lists every device signed in with your login, with the last time each was used and a mark on **This device**. Press **Sign out** beside one, or **Sign out other devices** to keep only this one. Do this at once if you lose a phone or left a computer signed in.

Good to know

- **Sign out** ends your session on the server too, not only on your screen.
- Changing your password signs out your other devices. An admin reset signs out all of them.
- After **10 wrong passwords in 15 minutes**, sign-in is paused for that login for the rest of the 15 minutes. Wait, then try again.
- Not opening the app for 7 days signs you out. Just sign in again.
- If you see *“You were signed out. Please sign in again.”*, another device or the admin ended your session.
- Keep your own login private. A login used by several people hides who did what.

Quick answers everyone

The questions people ask most.

Where do I enter daily expenses? +

Where do I enter the monthly security, electricity or lift bill? +

How do I see what we spent on each element? +

A bill did not change after we spent more. Why? +

Why is a lift (or generator) check not on my checklist? +

Where do I record the lift licence, insurance or fire inspection? +

I cannot see a screen my colleague sees. +

The guard says my vehicle is “Registered, no parking”. +

How do I change the language? +

I could not vote in a poll. +

My NOC request says dues are pending. +

The guard will not let our maid in. +

My flat's first bill is for part of a month. Why? +

Do empty flats pay less maintenance? +

I forgot my password. +

Not in the app yet

- Amenity charges and deposits are recorded on the booking but not added to bills or accounts.
- Reading a number plate from a camera photo. The gate check uses a typed or scanned number.

- Scanning the domestic help QR with the phone camera at the gate. The guard searches by name, mobile or pass number.
- Paying a bill online from the app, and billing of shops and rent. Payments are recorded by the office for now.
- Hindi and Marathi on every screen and PDF. The menu and main screens are done; bills and receipts are still English.
- A one-time password (OTP) at sign-in.
